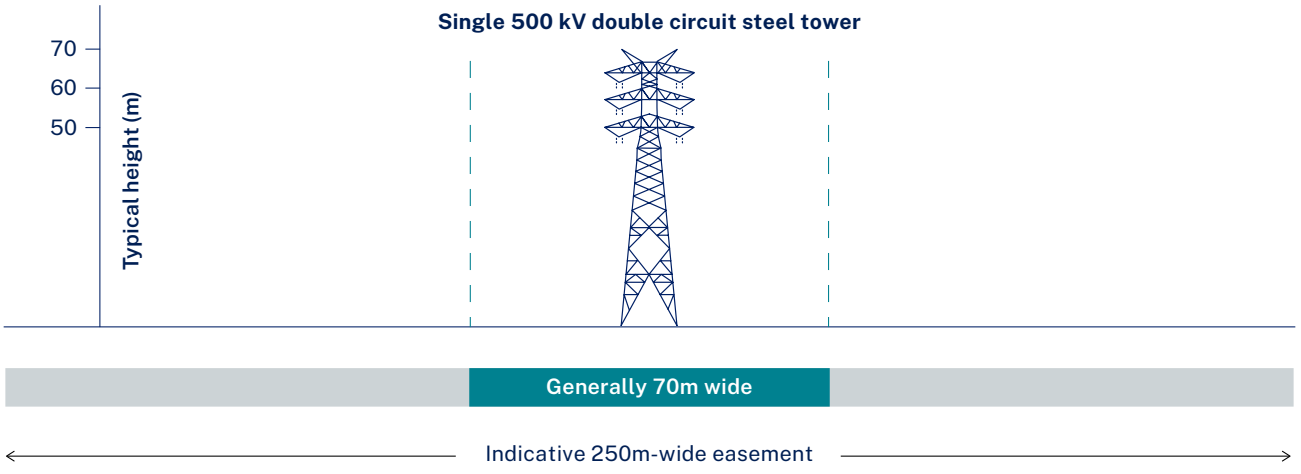
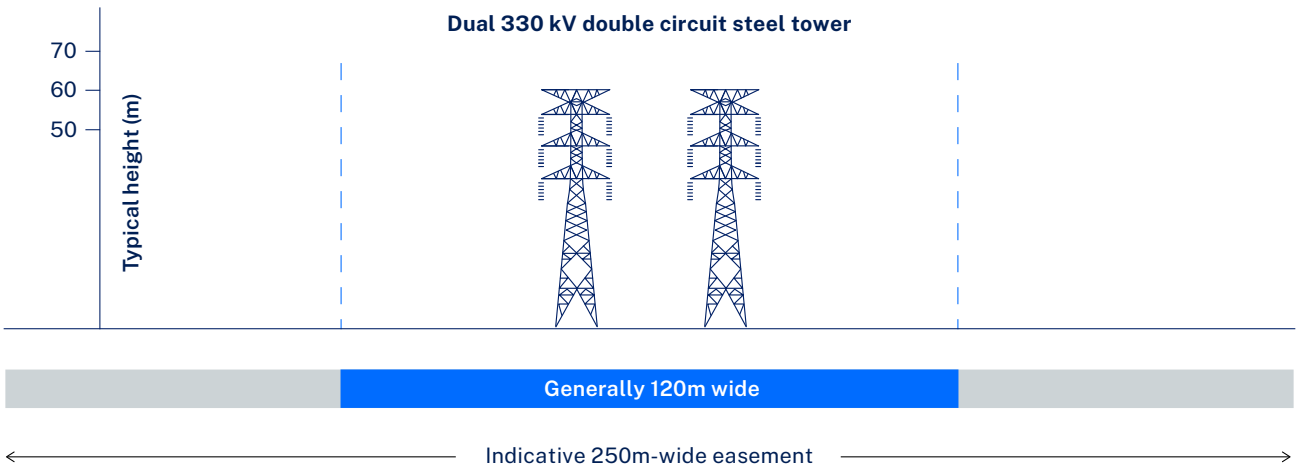
Construction easement diagram

Scenario 1: Single 500 kV easement



Scenario 2: Dual 330 kV easement



Scenario 3: Dual 500 kV easement

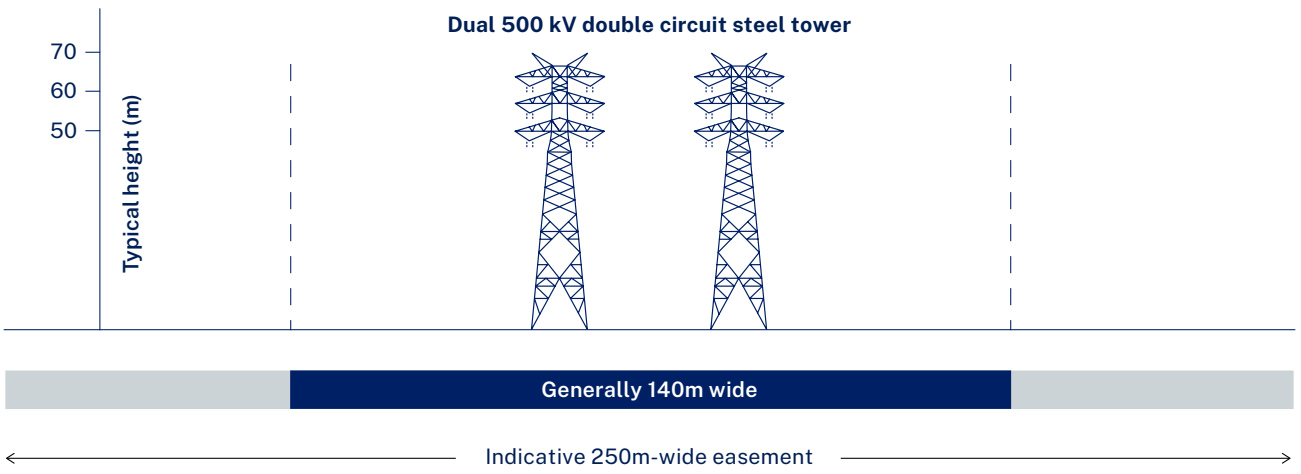


Figure not to scale and represents indicative maximum heights and minimum easement widths. In some instances, dual towers may not be positioned side by side. Final easement dimensions and locations will be discussed directly with landholders. 500 kV towers may be operated at a lower voltage. Easement widths may vary and can increase in areas of long spans. The final transmission easement may not be centred within the 250 m easement.
